History of Nova Llevant

Nova Llevant began its journey more than 35 years ago as a family-run business dedicated to electrical installations. Over the years, not only has the company grown its workforce, which currently numbers more than twenty, but it has also expanded its services, including plumbing, air conditioning, telecommunications installations, and the addition of engineering services.

Our goal is to provide a comprehensive service, allowing our clients to find everything they need for the development and maintenance of their projects in one place. We are committed to incorporating the latest innovations to optimize our processes and ensure an increasingly efficient, safe, and sustainable service.

We are aware of the legislative changes that regulate our industry, adapting to new regulations to ensure legal compliance and promote more sustainable practices. This ability to evolve and adapt has allowed us to establish ourselves as a trusted company, prepared to face the challenges of the future with determination and excellence.

Nova Llevant has established itself as a key player in the Mallorcan market, establishing connections with other professionals in the sector. We are committed to continuing to advance and evolve alongside the industry.

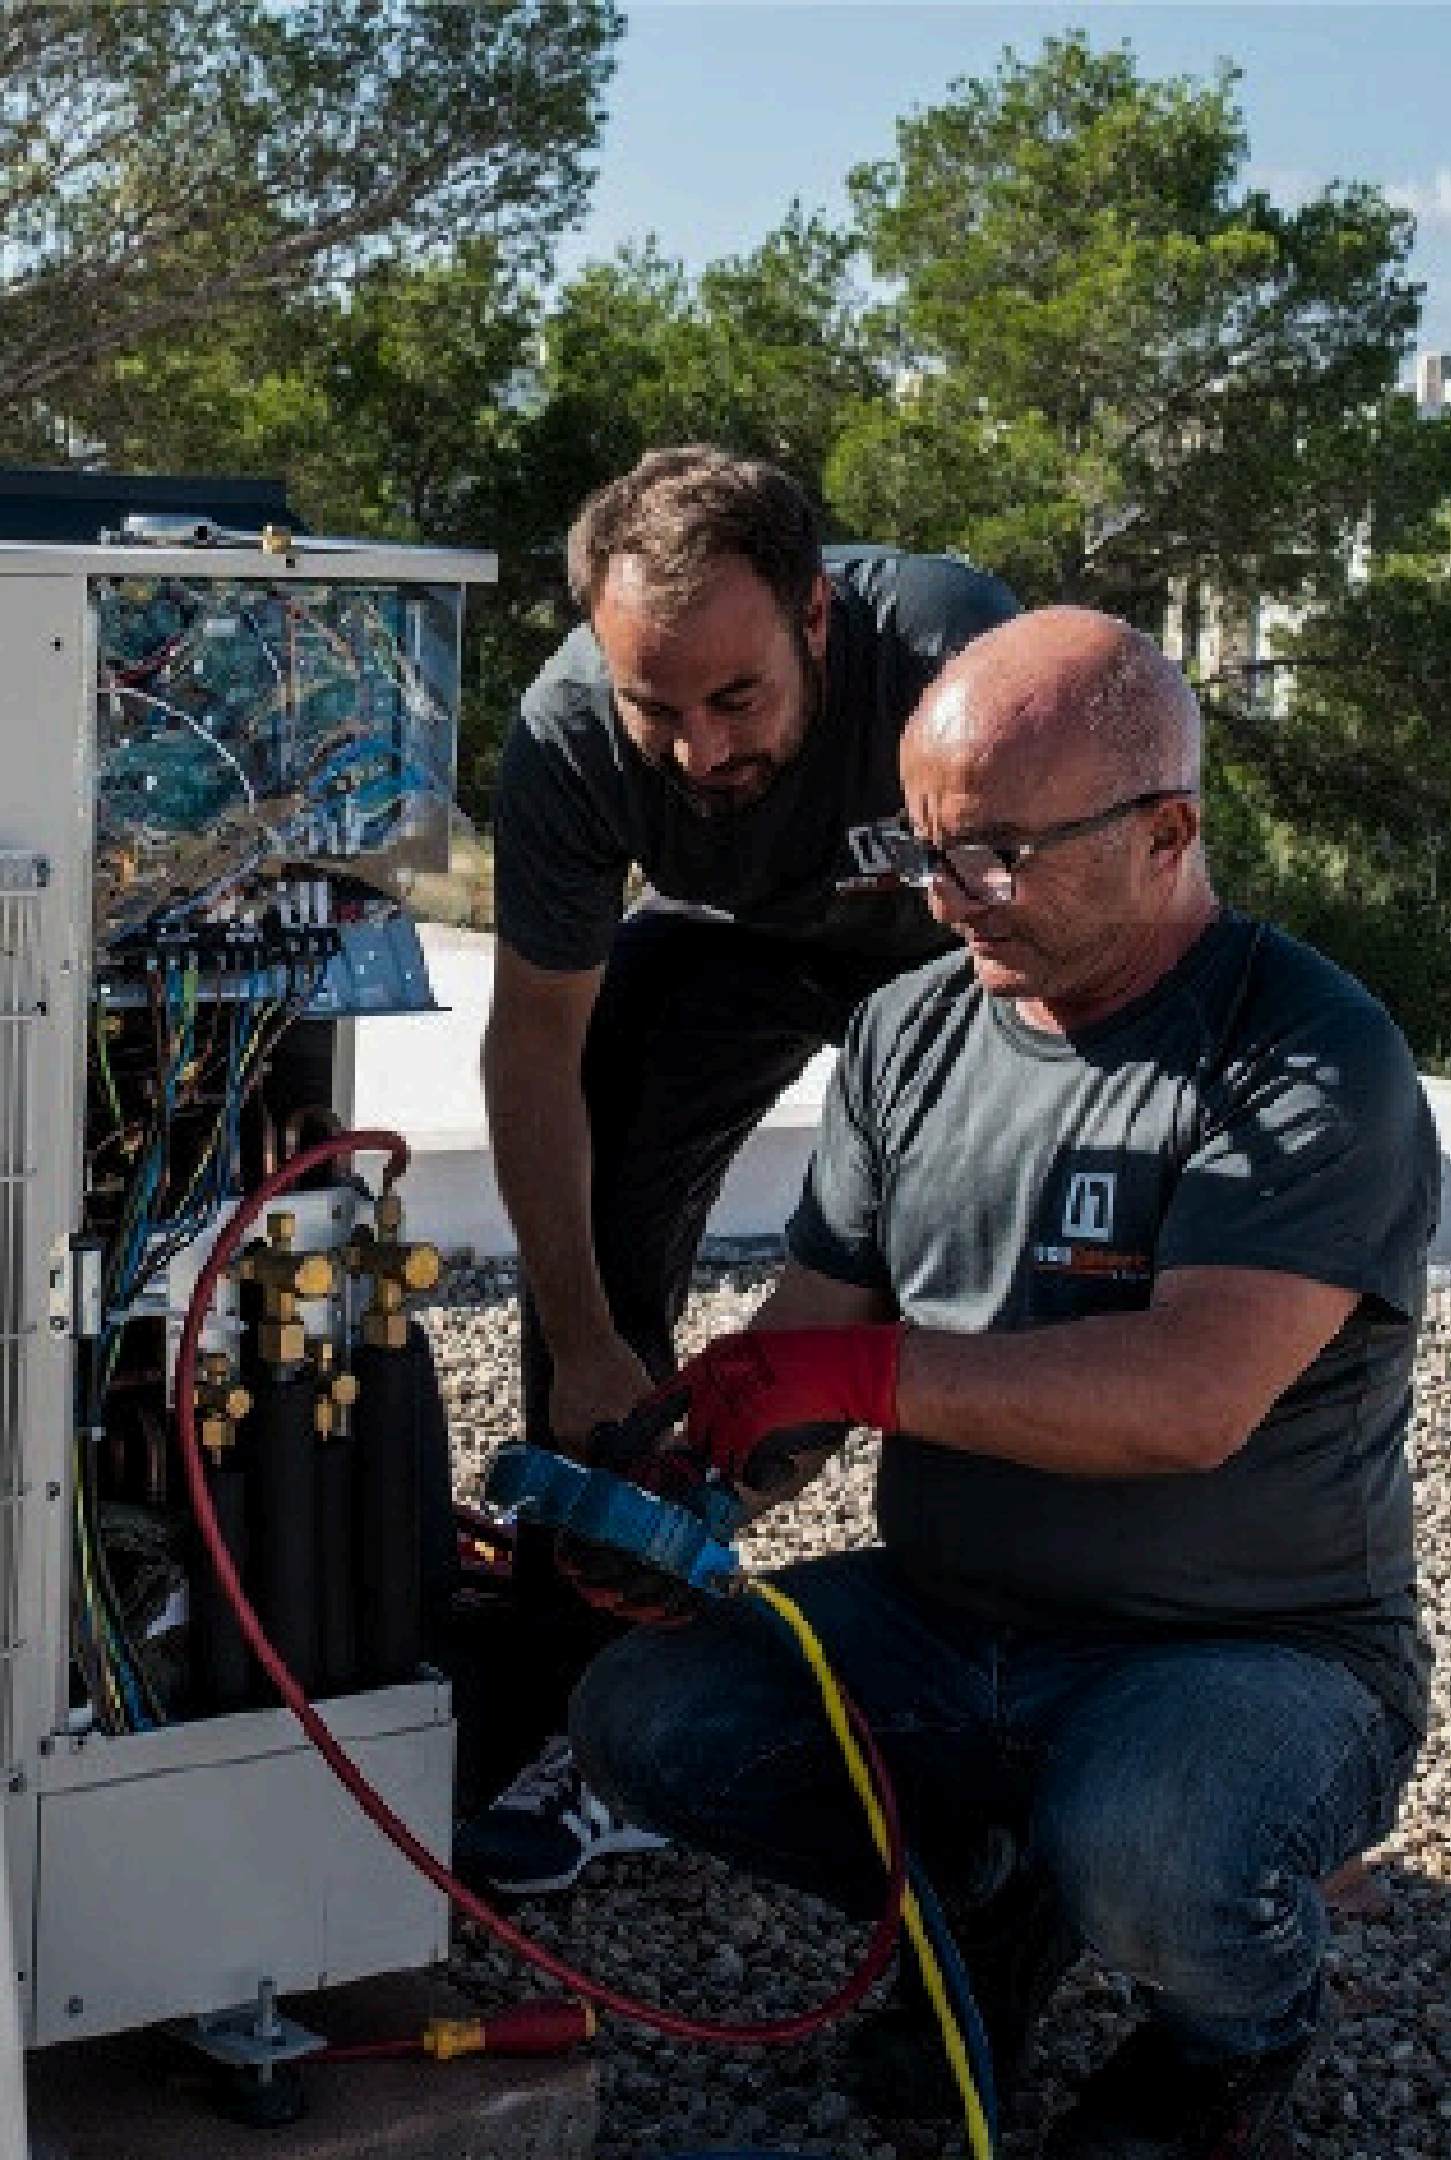

Our founder

Sebastià Manresa: 40 years of experience in this sector

With a clear vision and a commitment to excellence, he has led key initiatives that have strengthened our market position and ensured quality and customer satisfaction. His ability to identify opportunities and foster a collaborative work environment has allowed our team to achieve great results and adapt to the changing demands of the industry.

Get to know our services

We offer a tailored service to meet each client's needs, preparing personalized studies with an economic assessment for each situation. Our goal is to provide the best support based on our principles of quality, safety, responsibility, and professionalism. To achieve this, we rely on engineering professionals who will carefully and personally handle your projects.

We want to make things easier, and that's why we have all these services in one place: electricity, plumbing, HVAC, fire protection, self-consumption, home automation, telecommunications, administrative procedures, electrical and HVAC projects, energy efficiency certificates, etc.

1. Electrical installations

With over 30 years in the sector, at Nova Llevant, we carry out all types of electrical projects, whether for single-family homes, residential buildings, or commercial and industrial premises. We provide innovative solutions tailored to each client, always working in accordance with current technical and safety regulations.

Our electrical installation services include:

- Electrical projects: design and development of electrical projects for new constructions, renovations, and legalizations.
- Electrical installations: design, execution, and maintenance of low- and medium-voltage installations.
- Electrical renovations: adaptation and modernization of facilities to comply with current regulations.
- Electrical panels: assembly, installation, and maintenance of electrical panels for homes and businesses.

- Home automation: smart solutions to improve energy efficiency and comfort.
- Efficient lighting: customized LED lighting projects to reduce energy consumption.
- Electrical protection systems: installation of protection against surges and electrical faults.
- Preventive and corrective maintenance: maintenance service to ensure the proper functioning of facilities.

Nova Llevant's goal is to support the client throughout the entire process, from the sizing and layout of the facilities, through project execution, to legalization and commissioning. Furthermore, once the installation is complete, a personalized maintenance service is offered to ensure the facilities operate properly and sustainably.

2. Plumbing

At Nova Llevant, we cover all needs related to water supply, sanitation, domestic hot water (DHW), and heating for any type of building, whether residential, commercial, or industrial. We have a team of technicians specialized in the sizing and installation of:

- Boilers and aerothermal systems: efficient solutions for generating heat and domestic hot water.
- Heating systems: installation of underfloor heating or radiators, tailored to the specific needs of each client.
- Pressure systems: systems designed to ensure constant and adequate water pressure in all facilities.
- Water treatment equipment: including water softeners and reverse osmosis systems to improve water quality.

In addition, we offer a breakdown and maintenance service, ensuring the operation and efficiency of all facilities.

3. Heating, Ventilation, and Air Conditioning (HVAC)

At Nova Llevant, we handle the installation of air conditioning systems for single-family homes, commercial buildings, and industrial buildings. Our services include the installation of:

- Heat pumps: installation of efficient systems for heating and cooling.
- VRV (Variable Refrigerant Volume) systems: variable flow solutions for precise temperature control.

- **Aerothermal systems:** systems that harness the energy of the air to efficiently heat and cool.
- **Heat recovery units:** equipment that improves energy efficiency by recovering heat from the exhaust air.
- **Forced ventilation equipment:** systems that ensure adequate and controlled ventilation.
- **Air conduction systems:** design and installation of ducts for uniform air distribution.
- **Zoned temperature control systems:** solutions that allow the regulation of the temperature of different zones independently.

We develop HVAC projects, handling both the installation and legalization, always working in accordance with the specific RITE regulations for this type of installation. We also provide regular maintenance services to ensure that HVAC systems operate efficiently and extend their useful life to the maximum.

4. Engineering services

At Nova Llevant, we have included engineering and technical office services to provide our clients with a comprehensive service for any installation projects.

1. Project management: planning, organization, and supervision of all phases of the project, ensuring that established deadlines and budgets are met.
2. Technical documentation preparation: creation and maintenance of plans, specifications, technical reports, and instruction manuals, in compliance with current rules and regulations.

3. Construction management: supervision and coordination of activities on the construction site, ensuring that technical specifications are followed and quality standards are met.

4. License and permit management: processing of the necessary licenses and permits for the execution of projects, ensuring compliance with local regulations.

- Quality control: establishing quality procedures and standards, conducting inspections and testing to ensure that products or services meet established requirements.
- Risk management: identification, evaluation, and mitigation of potential risks that may affect the project.
- Energy certificates: preparation of energy certificates to assess and improve the energy efficiency of buildings.

These services allow us to guarantee the technical and regulatory viability of projects, optimizing their development and ensuring their success.

5. Self-consumption

We carry out customized photovoltaic energy studies, evaluating the consumption and needs of each consumer. We install photovoltaic solar energy systems, developing a plan that adapts to the specific characteristics of the space, considering factors such as location, orientation, and shading to ensure optimal performance.

Other services:

- Electric vehicle charging installations: we install electric vehicle chargers, tailored to the client's needs.
- Energy consulting: we offer an energy consulting service and work directly with the energy supplier to manage energy contracts.

6. Fire protection services

- System design and installation: includes automatic sprinkler systems, water storage tanks, pumping equipment, alarm and detection systems, and clean agent extinguishing systems.
- Preventive and corrective maintenance: performing periodic inspections and repairs necessary to ensure that systems are functioning properly.

7. Pool installation

At Nova Llevant, we can also handle the sizing and installation of your pool, be it for a single-family or for a community pool. Among our pool services, you can find the following:

- High-efficiency filtration systems: we implement advanced filtration systems that ensure optimal water circulation and the effective removal of impurities.

- Antibacterial treatments: we use advanced disinfection methods that include the application of specific chemicals and ozonation systems to keep the water pathogen-free. We also offer traditional chlorination and saline chlorination systems, tailored to the client's specific needs, ensuring continuous and safe disinfection.
- LED lighting systems: We install energy-efficient LED lighting systems, designed to provide uniform, energy-efficient lighting, improving the aesthetics and functionality of the pool.

Net'n'clean

We've incorporated the Net'n'clean self-cleaning system, an innovative technology that automates the pool cleaning process, ensuring consistent maintenance and reducing the need for manual intervention.
